### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Atty. Allan Halluin on May 24, 1999.

2. The application has been amended as follows:

Claims 1 and 47 have been amended to include the limitation of claims 2 and 48

respectively:

(Amended) 1. A method for electrochemical placement of a material at a specific location on a substrate, which comprises the steps of :

providing a substrate having at its surface at least one electrode that is proximate to at least one molecule bearing at least one protected chemical functional group,

placing a buffering or scavenging solution in contact with the electrode at the surface of the substrate to prevent the electrochemically generated reagents from leaving the locality of the electrode,

Art Unit: 1741

applying a potential to the electrode sufficient to generate electrochemical reagents capable of deprotecting at least one of the protected chemical functional groups, and bonding the deprotected chemical functional group with a monomer or a pre-formed molecule.

<sup>45</sup>  
(Amended) 47. A method for electrochemical placement of a material at a specific location on a substrate, which comprises the steps of:

providing a substrate having at its surface at least one electrode that is proximate to at least one molecule that is reactive with an electrochemically generated reagent,

*az*  
placing a buffering or scavenging solution in contact with the electrode at the surface of the substrate to prevent the electrochemically generated reagents from leaving the locality of the electrode,

applying a potential to the electrode sufficient to generate electrochemical reagents capable of reacting to the at least one molecule proximate to the electrode, and producing a chemical reaction thereby.

*[*  
Amend page 38, lines 1-5 of the specification to spell out the full chemical terms for MOPS (morpholinopropanesulfonic acid), HEPES (4-[2-hydroxy ethyl] - 1 <sup>4</sup> piperazine ethane sulfonic acid), TRIS (tris [hydroxy methyl] amino methane) and KI (potassium iodide) buffers.

Claims <sup>1</sup>2, <sup>1</sup>10 and ~~48~~ have been canceled.

3. The following is an examiner's statement of reasons for allowance: Upon a reasonable search of the prior art, the Examiner was unable to disclose a teaching of Applicant's method for solid phase synthesis of polymer sequences, that employs electrochemical techniques for the preparation of the polymers, and performs the electrochemical placement in the presence of a buffer solution. The prior art method most closely related to Applicant's invention is that of Southern, WO 93/22480. While Southern employs a similar technique, he fails to suggest the use of a buffer solution during the synthesis of oligomer. The method of Southern also requires highly accurate control of the electrode spacing for limiting the extent of diffusion of the electrochemically generated reagents away from the desired points of synthesis. Applicant's method offers an improvement over the prior art method of Southern as Applicant's electrode array allows for close positioning of the electrodes, without the need for electrode adjustment and readjustment. Applicant's electrode positioning effectively eliminates "chemical cross-talk" as a result of the presence of electrochemically generated reagents at undesired synthesis sites of the substrate. Still further, the inventive method's use of a highly efficient deprotection and coupling mechanism, and electrochemical synthesis in the presence of a buffering solution offers an advantage over the prior art methods as it allows for synthesis of a variety of chemical sequences at lower cost, and higher production rates using more efficient manufacturing equipment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
